## 462 - Pollution Liability Insurance Program Capital Project Request

2023-25 Biennium

Version: C1 2023-25 Capital Budget Request Report Number: CBS002

Date Run: 9/20/2022 11:18AM

Project Number: 30000703

Project Title: 2019-21 Leaking Tank Model Remedies Activity

Project Class: Program

#### **Description**

Starting Fiscal Year: 2020 Agency Priority: 9

#### **Project Summary**

Continued spending authority is requested to bring fourteen (14) petroleum hydrocarbon contaminated sites to regulatory closure by 2024. Some sites are located within the Puget Sound recovery area such that this grant program reauthorization is related to the Puget Sound Partnership's Action Agenda implementation.

#### **Project Description**

Washington's existing underground storage tank (UST) infrastructure is aging. In the 1990s, television news coverage of leaking fuel tanks and their impact on community drinking water sources led to national initiatives for large-scale replacement or lining of UST infrastructure. Now, more than 20 years later, the infrastructure once again needs replacing or upgrading, but national attention is focused elsewhere.

Washington has more than 2,900 leaking UST sites awaiting remediation, several of which include historical contamination. The Pollution Liability Insurance Agency (PLIA) is committed to working with federal and state partners to clean up leaking underground storage tanks and this appropriation is a priority element of a multi-year action agenda.

PLIA's Technical Program Manager, Nnamdi Madakor is providing oversight as model remedies are implemented by private business operators under an interagency agreement signed June 6, 2018. A model remedy is a proscribed cleanup approach developed for a specific type of contaminated site.

Under the agreement, PLIA will review and approve access to capital funds that are applied to conduct site assessments, remedial investigations and/or feasibility studies in accordance with the Model Toxics Control Act (MTCA) Chapter 70.105D of the Revised Code of Washington. The 2018 Legislature affirmed the sites chosen for this grant program.

To make the request for continued spending authority next biennium, we have assumed the following:

It will take an average of three (3) years before regulatory closure is achieved and this appropriation, fully expended. We provided an initial allotment plan that assumed \$978,388 in grant awards pass back to the Department of Ecology (April, 2018) which means for budget purposes, an encumbrance of \$69,884.86 per site will be established by our agency. These are voluntary clean-up actions, and they have not yet been fully designed and confirmed by private business owners. Some adjustment to the amounts required for sampling and environmental reports over the next three years will be made when data gaps are resolved.

## 462 - Pollution Liability Insurance Program Capital Project Request

2023-25 Biennium

Version: C1 2023-25 Capital Budget Request Report Number: CBS002

**Date Run:** 9/20/2022 11:18AM

Project Number: 40000002

Project Title: Underground Storage Tank Capital Financial Assistance Pgm 2023-25

Project Class: Grant

#### Description

Starting Fiscal Year: 2024 Agency Priority: 1

#### **Project Summary**

New expenditure authority is requested to access petroleum product tax receipts forecast to be available by July 1, 2023 and put those dollars to work for the economic vitality, health and well being of ports, landowners and small business operators throughout Washington by removing and upgrading underground tank systems particularly where historical contamination or abandonment may pose a long-term threat to groundwater reserves of a community. This is a multi-biennial effort and is related to the Puget Sound Partnership's Action Agenda implementation.

#### **Project Description**

This project tackles Washington's aging underground storage tank (UST) infrastructure, the existing barriers to cleaning up historical contamination from leaking UST sites, and the evolving transportation fuel market.

Since 2015, petroleum product tax receipts have been put back into the economy to encourage refueling owners and operators to replace or upgrade aged fuel systems to prevent leaks and dispense modern fuels. Our agency engages financially responsible parties and technically guides clean up for historical or ongoing contamination caused by UST releases. We help transform old stations into the gas stations of the future as convenience store operators adapt to the changed transportation fuel market. Loan discounts are available to incentivize the installation of alternative fueling infrastructure such as electric vehicle (EV) charging stations.

Unfortunately, Washington has more than 2,900 leaking UST sites awaiting remediation. PLIA is committed to working with federal, state and local partners and the combined new and reauthorized spending authority is a priority element of a multi-year action agenda. Two factors affect the overall ability to resolve historical contamination in Washington: 1) the high groundwater tables in many parts of the state, and 2) Washington's stringent environmental cleanup laws. When a gasoline leak reaches the groundwater table, cleanup costs rise sharply. In Washington's major metropolitan areas, redevelopment has led to a large number of cleanups. In many of the state's rural areas, however, property values are disproportionate to cleanup costs, so redevelopment has not been as successful a driver of cleanup.

Financial barriers are significant. Many owners and operators of USTs are currently unable to access the financial resources necessary to upgrade their UST systems and clean up residual contamination. Traditional lenders are hesitant, and sometimes unable, to provide financing for UST infrastructure, especially if the property already has documented contamination. In addition, many of the UST owners in Washington are small business owners who cannot raise the capital needed from other sources, despite their desire to clean up existing contamination and protect the environment from future releases of contaminants.

Project Title: Heating Oil Capital Financing Assitance Program 2023-25

Project Class: Grant

#### Description

Starting Fiscal Year: 2024 Agency Priority: 2

#### **Project Summary**

New expenditure authority is requested to access petroleum product tax receipts forecast to be available by July 1, 2023 and put those dollars to work for the economic vitality, health and well being of ports, landowners and small business operators throughout Washington by removing and upgrading heating oil systems and infrustructure particularly where historical contamination or abandonment may pose a long-term threat to groundwater reserves of a community. This is a multi-biennial effort and is related to the Puget Sound Partnership's Action Agenda implementation.

#### **Project Description**

This project tackles Washington's aging commercial heating oil (HO) infrastructure, the existing barriers to cleaning up historical contamination from leaking HO sites, and the evolving transportation fuel market.

Since 2015, petroleum product tax receipts have been put back into the economy to encourage refueling owners and operators to replace or upgrade aged fuel systems to prevent leaks and dispense modern fuels. Our agency engages financially responsible parties and technically guides clean up for historical or ongoing contamination caused by HO releases.

Unfortunately, Washington has thousands of leaking HO sites awaiting remediation. PLIA is committed to working with federal, state and local partners and the combined new and reauthorized spending authority is a priority element of a multi-year action agenda.

Financial barriers are significant. Many owners and operators of HO infrastructure are currently unable to access the financial resources necessary to upgrade their HO systems and clean up residual contamination. Traditional lenders are hesitant, and sometimes unable, to provide financing for HO infrastructure, especially if the property already has documented contamination. In addition, many of the Ho owners in Washington are small business owners who cannot raise the capital needed from other sources, despite their desire to clean up existing contamination and protect the environment from future releases of contaminants.

## 462 - Pollution Liability Insurance Program Capital Project Request

2023-25 Biennium

Version: C1 2023-25 Capital Budget Request Report Number: CBS002

**Date Run:** 9/20/2022 11:18AM

Project Number: 30000702

Project Title: Underground Storage Tank Capital Financing Assistance Pgm 2019-21

Project Class: Grant

#### Description

Starting Fiscal Year: 2020 Agency Priority: 5

#### **Project Summary**

Reauthorization of spending authority granted by the 2019 Legislature is requested to meet the expected cash flow for applications converted to financed projects from awards years one and two. Based on recently completed assessments, most owners and operators are looking at 60 months from construction initiation to regulatory closure.

#### Project Description

This project tackles Washington's aging underground storage tank (UST) infrastructure, the existing barriers to cleaning up historical contamination from leaking UST sites, and the evolving transportation fuel market.

Since 2015, petroleum product tax receipts have been put back into the economy to encourage refueling owners and operators to replace or upgrade aged fuel systems to prevent leaks and dispense modern fuels. Our agency engages financially responsible parties and technically guides clean up for historical or ongoing contamination caused by UST releases. We help transform old stations into the gas stations of the future as convenience store operators adapt to the changed transportation fuel market. Loan discounts are available to incentivize the installation of alternative fueling infrastructure such as electric vehicle (EV) charging stations.

Unfortunately, Washington has more than 2,900 leaking UST sites awaiting remediation. PLIA is committed to working with federal, state and local partners and the combined new and reauthorized spending authority is a priority element of a multi-year action agenda. Two factors affect the overall ability to resolve historical contamination in Washington: 1) the high groundwater tables in many parts of the state, and 2) Washington's stringent environmental cleanup laws. When a gasoline leak reaches the groundwater table, cleanup costs rise sharply. In Washington's major metropolitan areas, redevelopment has led to a large number of cleanups. In many of the state's rural areas, however, property values are disproportionate to cleanup costs, so redevelopment has not been as successful a driver of cleanup.

Financial barriers are significant. Many owners and operators of USTs are currently unable to access the financial resources necessary to upgrade their UST systems and clean up residual contamination. Traditional lenders are hesitant, and sometimes unable, to provide financing for UST infrastructure, especially if the property already has documented contamination. In addition, many of the UST owners in Washington are small business owners who cannot raise the capital needed from other sources, despite their desire to clean up existing contamination and protect the environment from future releases of contaminants.

For more information about our agency, this biennial request and active program participants, please see Publication No. 02-2018-07 the agency's 2018 Report to the Legislature or visit <a href="http://www.plia.wa.gov">http://www.plia.wa.gov</a>

## 462 - Pollution Liability Insurance Program Capital Project Request

2023-25 Biennium

Version: C1 2023-25 Capital Budget Request Report Number: CBS002

**Date Run:** 9/20/2022 11:18AM

Project Number: 30000001

Project Title: Underground Storage Tank Capital Program Demonstration and Design

Project Class: Grant

#### **Description**

Starting Fiscal Year: 2016 Agency Priority: 8

#### **Project Summary**

Continuation funding is requested to cleanup petroleum hydrocarbons and achieve regulatory closure for UST demonstration grant recipient by 2023.

#### **Project Description**

Sharp's Automotive is a small family-owed fuel and service station located in the township of Moxee near Yakima. The Sharp family purchased the business in 1987. The service station is a central part of the community and provides essential services to the surrounding area, especially area farmers. In 1994 during the nationally led upgrade efforts, underground storage tanks on this property were removed and replaced. Soil contamination was discovered when the ground was excavated and portions were cleaned but a full site restoration did not occur due to the limited availability of funds. The owners' circumstances and turndown of financial backing from a local credit union made this site an ideal candidate when lawmakers first authorized the use of petroleum product tax receipts for cleanup grants. As recently as 2016, vapor concerns were raised to the Department of Ecology. The extent of contamination of this and nearby properties has been the focus of study, along with air quality sampling and work to design a remedial action. Vapor extraction is ongoing and PLIA's environmental planner and lead consultant have developed financial strategies and options to help the Sharp's choose a path for regulatory closure (attachment)

#### 2019 - CAPITAL BUDGET PLAN

Method of Cash Flow for Subprojects

First, we summed the remedial action component including markup and infrastructure upgrade including markup. The burn on those dollars were averaged across month zero to month 24.

Second, the CAP and delineation to be completed; the burn on those dollars were averaged across month 3 to month 6. We are using the timeline template for the project as prepared in April 2018.

Third, the sum total of project management; the burn on those dollars were averaged across month zero to month 24.

Fourth, the sum total of engineering design; the burn on those dollars were averaged across month 3 to month 6.

Fifth, the sum total of construction observation; the burn on those dollars were averaged across month 18 to month 24.

Sixth, we have not budgeted the capital cost contingency sum. This money will be retained by PLIA in the Account (20T) and not distributed unless a change order is required during the execution of the remedial action.

Seventh, the sum total of monitoring, maintenance and closure; the burn on those dollars were averaged across month 24 to month 63.

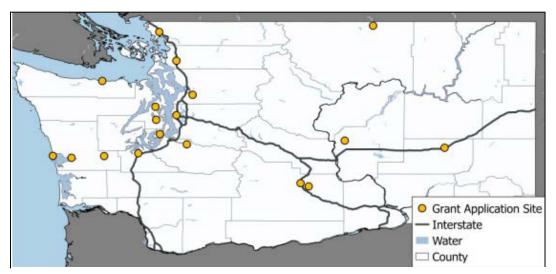

Month 63 is the NFA milestone.

## **Appendix B: 2015–2016 Capital Financial Assistance Grant Pilot Program**

Chapter 3, Laws of 2015, 64<sup>th</sup> Legislature, 3<sup>rd</sup> Special Session, Section 3085 directed PLIA to conduct a pilot demonstration at three study sites with aging tanks, contamination to soil and/or groundwater, and serious financial hardship. PLIA received 21 applications for the Pilot Program grants.

PLIA Proviso Grant Applications Received

PLIA reviewed and ranked each applicant based on the selection criteria established for the program to select the three sites eligible for Pilot Program grants. On August 17, 2015, PLIA awarded three \$600,000 grants to the following recipients: Acme Fuel Company of Olympia; Genesee Fuel and Heating Company, Inc. of Seattle; and Sharp's Automotive of Moxee.

After selecting the three pilot demonstration sites, PLIA met with each of the grantees and their environmental consultants to review existing information for their sites and develop cleanup and infrastructure upgrade plans. PLIA's successful Pilot Program provides the foundation for expansion to the full Loan and Grant Program in 2017.

On the following pages are profiles of each of the pilot demonstration grant sites.

### **Acme Fuel Company, Olympia**

Acme Fuel Company, founded in 1925, is a third generation family-owned business located in downtown Olympia. Acme Fuel Company provides fuel services to homes and businesses throughout Thurston and Mason Counties. They deliver propane and heating oil to homes, repair and install heating and cooling equipment, and

operate two card lock gas stations that provide fuel to businesses and individuals.

In 2011, Acme Fuel Company's fuel supplier delivered fuel to a discontinued tank, resulting in a catastrophic release and an emergency cleanup. During the cleanup investigation they discovered historical contamination from the underground fuel piping and fittings which had been leaking over several years. Upon discovering the contamination, Acme Fuel Company's owner, Christophe Allen, worked with an environmental consultant to develop a plan to clean up the contamination. Mr. Allen was surprised to learn that while his insurance policy covered the cleanup work, none of the station rebuilding costs would be covered. He approached his banker to set up financing and was told that the bank would not be able to help, because his property was already contaminated, and the costs were too large compared to the size of his small family business.

The pilot program grant allowed Acme Fuel Company to move ahead with the teardown of the station and cleanup of the contamination using insurance funds, with the reassurance that they would have the resources to put their station back together once the contamination was removed. With the grant funds, Acme Fuel Company has installed new tanks and lines that are less likely to leak in the future.

**Current Project Status:** Cleanup and tank system upgrade complete. Performance monitoring ongoing.

### Genesee Fuel & Heating Company, Inc., Seattle

Genesee Fuel & Heating Company is a third generation family-owned business located in South Seattle. The company, started in 1929, is one of only three companies that provide heating oil services to the Seattle area. Genesee Fuel & Heating Company is also the largest dealer of bioheat, which is a form of biodiesel used for home heating. The company provides

biodiesel blends of up to 99% biodiesel for their environmentally conscious customers.

In January 2015, the owner of the company, Steve Clark, received a notice of nonrenewal from his insurance company, stating that his coverage would be discontinued within three months due to the age of his company's USTs. The tanks were installed in 1949 and 1955. Without an insurance policy, Mr. Clark could not meet the state and federal operating requirements. Although his company was financially sound, Mr. Clark's banker was unable to assist him with financing for tank replacement. Mr. Clark's banker explained that trucks and buildings are simple to finance, as they are easy to collateralize, but financing for a UST would be an uncollateralized loan—something his bank could not provide. Without the Pilot Program grant award, Mr. Clark would not have been able to remove the outdated tank system and clean up the associated contamination in order to install an upgraded tank system. Without the upgraded system, Mr. Clark would not have been able to continue to operate his business.

**Current Project Status:** Cleanup and tank system upgrade complete. Performance monitoring ongoing.

#### Sharp's Automotive, Moxee

Sharp's Automotive is a small family-owned fuel and service station located in the town of Moxee near Yakima. The Sharp family purchased the business in 1987. The service station is a central part of the community and provides essential services to the surrounding area, especially area farmers.

In 1994, during the nationally led UST upgrade efforts, the station's USTs were removed and replaced. Soil contamination was discovered on the site and interim cleanup actions were completed, but a full cleanup of the site did not occur due to the limited availability of funds.

In 2016, the Department of Ecology issued a letter to Mr. and Mrs. Sharp and the previous property owner, noting potential vapor intrusion concerns. The Sharp's were denied financing from their local credit union and were unable to fund the investigation and cleanup work necessary at their site. PLIA grant funds are being used to complete the site investigation, secure access agreements, and conduct vapor monitoring to set MTCA cleanup levels for the site.

**Current Project Status:** Investigation into residential vapor intrusion complete. Vapor extraction ongoing.

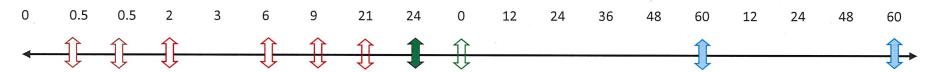

### PLIA PPA FUNDING & IMPLEMENTATION TIME-LINE TEMPLATE

**Project Name: Port of Skagit** 

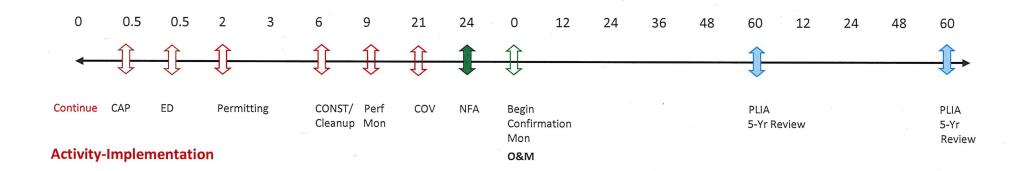

**Project Cost:** \$224,400.00 (Cleanup = \$224,000 + Infrastructure Upgrade = \$0.00)

Preferred Remedy: GW Model Remedies #1: Excavation & #5: MNA

#### **TIMELINE - months**

### Funding \$

Please Note: <u>Covenant</u> and <u>Confirmation Monitoring</u> & <u>5-yr Review</u> may not apply

#### NOTES:

Excavation is assumed to be roughly 15 feet by 20 feet with a final depth of 12 feet. Slope back is assumed to be roughly 1 Horizontal:1 Vertical

Unit rates for excavation and disposal are inclusive of costs associated with trucking and disposal fees.

This feasibility level cost should not be considered a guaranteed cost.

Unit rates for excavation and disposal assume that the property owner pays these costs directly. If not a mark-up will apply, Please note that disposal rates are subject to annual inflation.

This estimate assumes 50% of soils from the excavation area pass requirements for disposal as Class 3 and 50% of soils pass requirements for disposal as Class 2 soil. If the requirements are not met, soil will be disposed of as appropriate. Soil from the slope back is assumed to be non-impacted, including passing toxicity characteristic leaching procedure for metals.

Cost rounded up to nearest \$1,000.

<sup>(1)</sup>Additional direct costs such as project management, regulatory communications and reporting, and other technical support services not specifically listed are not included in any future annual costs.

(2)Annual cost is Year 2017 cost.

% = percentage

bgs = below ground surface

n = number of years of compliance monitoring and O&M

O&M = operation and maintenance

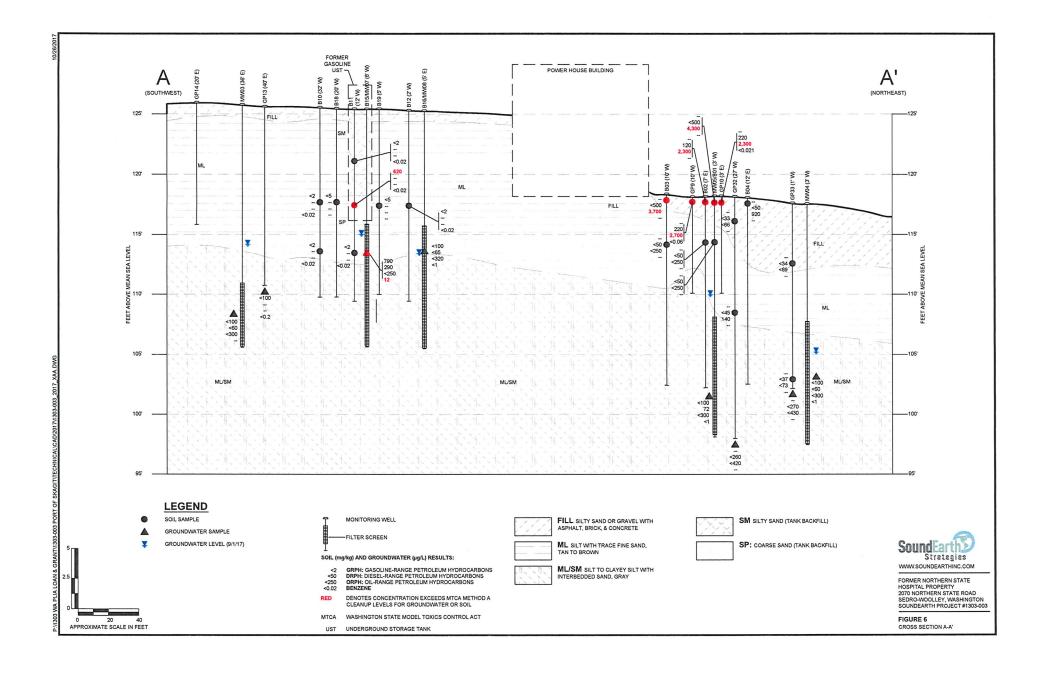

PCS = petroleum-contaminated soil

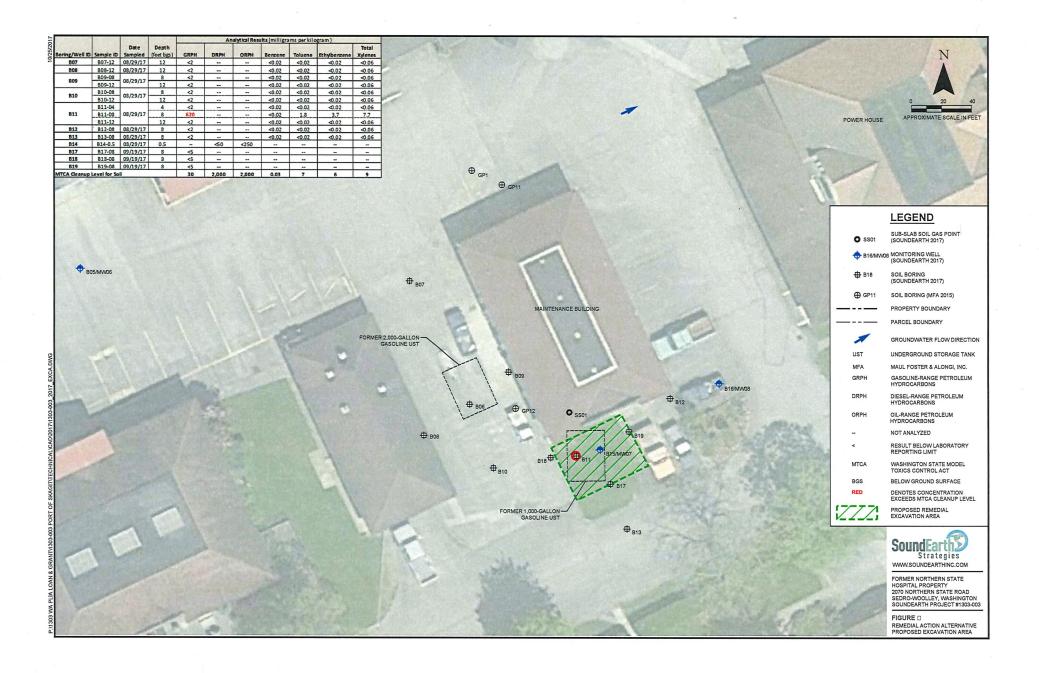

QTY = quantity

SEPA = State Environmental Policy Act

sf = square feet

ton = number of bank cubic yards x 1.8 ton/bank cubic yard

## FORMER NORTHERN STATE HOSPITAL PROPERTY, SEDRO-WOOLLEY, WASHINGTON

The Former Northern State Hospital property, located in Sedro-Woolley, Washington, is a 225-acre property that was initially developed in 1909. The property historically operated as a treatment and residence facility and hospital for people with mental illness until 1973. The property is currently comprised of approximately 80 buildings, some of which are leased by tenants, including the U.S. Department of Labor for Cascade Job Corps program and the Washington Military Department National Guard. The property was recently purchased by the Port of Skagit, who will be working in

partnership with the City of Sedro-Woolley, Skagit County, and the Washington State Department of Enterprise Services to redevelop the property into a center for innovation and technology.

Previous environmental investigations conducted at the property between 1993 and 2014 identified several areas of concern throughout the property, which included chlorinated solvent contamination near a former laundry building, heavy oil contamination near the Power House building, and lead, arsenic, and other metal contamination throughout the property. In 2017, the Washington Pollution Liability Insurance Agency funded a Preliminary Planning Assessment focusing on areas of concern associated with impacts from petroleum hydrocarbons. During this assessment, SoundEarth advanced soil borings and installed groundwater monitoring wells near former gasoline underground storage tanks associated with a former fueling station, as well as behind the Power House building at the property to evaluate the presence and extent of petroleum hydrocarbon contamination in soil and groundwater.

SoundEarth's investigation identified gasoline and benzene contamination in soil and groundwater near the former fueling station. Heavy oil contamination in soil behind the Power House building was identified, which was determined to be the result of fill material throughout that area. The vertical and lateral extents of contamination are defined in both areas, and soil and groundwater impacts were determined to be limited.

To address the soil and groundwater contamination in the identified areas of the property, SoundEarth recommended a remedial excavation to remove all contaminated soil and groundwater from the former fueling station area. The contaminated cleanup will be completed in conjunction with property-wide redevelopment activities.

**Current Project Status:** Awaiting Funding Status for Cleanup
