Healthy Washington –
Roadmap to Recovery
Phased reopening of Washington state agencies
Version 9
What changed in this version?

You will find a summary below that lists what we changed in this version of the guide. This will help agencies plan and implement changes more quickly. If you have questions, contact Cheryl Sullivan-Colglazier at cheryl.sullivan-colglazier@ofm.wa.gov.

Monthly Updates: We will update this guide, as needed, on the 15th of each month or the following business day. These changes will provide agencies with timely information so they can adjust or add to their plans to meet the updated requirements.

- **Pages 4-9** - This version of the Healthy WA – Roadmap to Recovery Guide for state agencies establishes a new framework for the next stages of reopening agency facilities, worksites and services. Key changes in this area are outlined in the *Introduction* and *How to prioritize and open services* sections, including the timelines for required steps.

- **Page 6** – Added requirement to create or update Commute Trip Reduction plans.

- **Page 7** – Updated approach related to county phases as we work to more closely align with these requirements.

- **Page 8** – Added a reporting requirement for telework. Reporting will begin at the point of staged implementation (August 15, 2021).

- **Page 8** – Modified the reopening plan approval process. A formal approval process is no longer needed new framework plans. If an agency is reopening services or other workplace functions before August 15, 2021, the current review and approval process is still required.

- **Page 9** – Added resources for agencies to use in developing their plans. Some of these websites will have resources added periodically for agencies to use. They include the new Remote Work Resources (Telework) site.

- **Page 10** – Updated the section on occupancy to reference the rates outlined in the Governor’s Healthy WA – Roadmap to Recovery phases. Emphasizes social/physical distancing, equipment, and PPE continuing to be important factors.

- **Page 11** – Clarified appropriate PPE needs to be provided for cleaning.

- **Page 13** – Added requirements to include information about the benefits of vaccination and how to access it in the Educate Employees section. Included resources.

- **Page 15** – Changed the facility log requirement, making it permissive based on facility and public health needs.

- **Page 18** – Removed the “3 month” criteria for quarantine when vaccinated.

- **Page 19** – Added update on travel restrictions and work-related travel limitations.

- **Page 20-21** – Removed requirement to notify OFM SHR of potential spread of cases.

- **Page 22** – Clarified current Guide requirements related to face coverings and vaccination remain in place. New guidance will be provided for state agencies after further consultation with L&I, DOH, and the Governor’s Office.

Introduction
The pandemic has provided a unique opportunity for state government to look differently at how, where, and when we get our work done as we serve Washington. This guide provides clarity and describes the requirements and guidance for agencies as the state reopens and we strengthen our new approach to work and workplaces. It is consistent with Gov. Jay Inslee’s Healthy Washington - Roadmap to Recovery direction to all Washington businesses and organizations.

We will continue to model the way by turning the dial of expanded reopening in a way that allows for learning and improvements. We will continue to use data and science to inform our return and in how we implement our safety and business practices for the ultimate goals of public service and COVID-19 prevention.

Our guiding principles:

- Provide timely, equitable, quality public service
- Prioritize business and customer needs
- Engage employees in finding shared solutions for success
- Apply innovative solutions that create a sustainable business model
- Use the best public health and safety practices

To apply these principles, we need to implement agency requirements and guidance that allow adaptability in a safe and responsible manner. Our main goal is to meet business expectations, keep employees and customers safe and healthy and continue to learn and improve as we test new strategies to meet our goals.

This includes knowing where and how our customers, clients and the public are best served and aligning access to meet those needs. It also means understanding employee needs as they transition back to the workplace or engage in increased levels of telework based on what we’ve learned.

The Washington State DOH, L&I, Office of the Governor and OFM partnered with agency leaders and subject matter experts to update this guide. The guide does not take the place of general health and safety requirements issued by these agencies or other authorizing sources. It is designed to provide clarity for state agencies in applying assessment and implementation for our overall return to workplaces, while applying COVID-19 related requirements.

This guide lays out the key parts to our reopening strategy and how we can rethink state agency worksites as we continue to improve how we serve Washington:
How to prioritize and open services

The COVID-19 pandemic has changed the way we work. We have learned a great deal about our capacity to perform many of our functions through telework and technology and remained clear about many essential services that must be done in our facilities and at our worksites. We also know that during the peak of the pandemic we were able to delay or create workarounds for some services to help us minimize the spread of COVID-19 while serving customers. Now it is time to use what we have learned to close gaps that still exist in our business processes and improve services and access.

To safely reopen, your Healthy Washington - Roadmap to Recovery plan must include ongoing support of a workforce that may continue to accomplish business outcomes through telework, while identifying the work that must be done on premise or in-person in the community. A combination of on-site and telework may be the best option for many lines of businesses and employees (a hybrid model).

As we move into this next stage of recovery and reopening, this means further analysis of work functions and services that can continue remotely and those that need to take place at worksites, facilities or in-person in the community in an effort to close business gaps, improve services, increase access, and better serve Washington. It also means engaging with employees to determine what is working, what can be improved and what can be done to further our goal to reduce unnecessary commute trips and be an employer of choice.

Agencies will use the following timeline to guide developing and implementing reopening plans or updates to plans:

- Complete next stage plan by: July 15, 2021
- Notify employees and others of new/updated plan: July 15 – August 1, 2021
- Begin next stage of reopening plan implementation: August 15, 2021
- Continue staged implementation consistent with the Governor’s direction for reopening: Ongoing

These plans are iterative and agencies will be expected to move to full implementation in a staged approach that aligns with closing priority business gaps and customer and employee needs. Leaders should communicate and provide updates regularly and keep employees and customers informed. The use of these types of change management strategies are a part of implementation and success.
Requirements and Guidelines

Assess and prioritize business gaps, workflow barriers and customer needs resulting from closures

- Determine what remaining services and functions the agency needs to perform at a facility, worksite or in-person in the community to meet agency goals and mission
- Create or update an action plan that outlines steps and timelines for reopening those services and closing other gaps that require in-person presence to achieve.
- Use information from employees and customers about business gaps and how best to close them. Pulse surveys and other means for gathering information from employees are recommended.
  - Supervisors should meet with their employees as a group or individually to discuss return to the workplace, ideas for improvement and telework options to inform the reopening plan.
- Collaborate with your facilities staff on the use of workspaces in your planning. Consider that future workspaces may be used differently than office spaces of today and use this opportunity to help with the transition. In particular, consider that the agencies will not be creating 2 workplaces for each employee (one remote and one in the office). Staff who mostly work remotely likely will not have an individual dedicated workspace in the office. Revised workspace guidelines are being developed to reflect this approach. If changes to the workplace are made, they shouldn’t incur substantial cost increases that aren’t offset by cost savings.
- Adopt practices that help the agency achieve the goals of universal access, equity, and inclusion.
- Ensure plan implementation allows the agency to meet reopening requirements outlined in this guide.
- Make sure the plan includes the steps needed for:
  - Employee awareness, readiness, and training, including allowing time to adjust to any needed schedule changes. Provide a reasonable amount of notice and time for employees to adjust. Sixty-day notice is recommended unless the employee wants to return sooner or business needs drive a quicker return for essential services.
    - Apply change management strategies including communicating updates to employees regularly and foreshadowing changes to come to help them prepare.
  - Facility readiness.
  - The agency’s need for and access to face coverings, equipment, supplies, or other personal protective equipment to meet expectations.
  - Creating or updating the agency Commute Trip Reduction plan and incorporating those changes into agency practices allowing for future reporting on commute trip reduction. In most cases, an agency’s CTR rates for telework should increase given what we’ve learned from our experience during the pandemic; and
Exit and return strategies should COVID-19 risks increase leading to the need to temporarily stop certain in-person services.

Assess what business objectives are being met through telework, flexible schedules, and technology and embed those practices in your agency culture

- Consider maintaining these approaches when service and business expectations are being met. Use the information gathered from employees and customers to inform what is working or what improvements can be made for success. This may include different hybrid telework or flexible schedules.
- Continue the use of telework, flexible schedules and technology to meet business needs where possible. If an employer or business partner doesn’t need to be at a state worksite or work a traditional schedule to perform all or some of their duties, support them achieving their work objectives at their telework site and/or with a flexible schedule.
- Ensure review and determination of telework eligibility and flexible schedules and make updates to HRMS and other related records to reflect any changes.
- Follow OFM State HR guidelines for the use of telework when an employee who is required to be on site is temporarily unable to work on site due to COVID-19 symptoms, exposure, or infection. This will occur when the person feels healthy enough to achieve assigned work objectives.

How reopening guidelines change by county

- Each county may differ in how far along it is in the reopening process. Some counties are more open than others based on the new Healthy WA - Roadmap to Recovery process. In many cases, this guide is aligned with the phases where the focus is on essential business and essential workers.
- If you have worksites or operations in a more restrictive region, follow local public health guidelines, updated direction from DOH, L&I, OFM, or the Office of the Governor, and consult with your assigned AAG(s).
- If you have worksites or operations in a less restrictive region, you may proceed with your plan to reopen those sites as long as you follow the requirements in this guide. The phases in the governor’s Healthy Washington - Roadmap to Recovery plan act as a minimum standard for how businesses and counties can reopen.
- If you have worksites and operations specifically outlined in the governor’s Healthy Washington - Roadmap to Recovery phases or business requirements (see bulleted link below), you must follow those requirements when they are more restrictive, unless OFM provides an exception. If you contract or have oversight for those types of businesses within a facility or worksite you operate, you must make sure those providers are meeting the expectations as a part of your contract or agreement.
How we will collect and measure data

- Each agency will be prepared to report the status of their Healthy Washington - Roadmap to Recovery reopening plan and include how they continue to utilize telework options and flexible schedules.

- Agencies will report to OFM the percentage of positions that have been designated telework eligible and the percentage of employees who are teleworking. Reporting will begin at the point of staged implementation (August 15, 2021). Additional information will be provided on format and frequency of reports. Setting a process to gather and report this data should be a part of each agencies planning process.

In addition, your CTR reports will be updated as required and as indicated above.

- We outline additional data collection and reporting requirements in applicable sections below.

What is the approval process to reopen facilities and services

- To implement the new framework for reopening, each agency will create and implement its plans. Broader approval is not required unless an agency wants to reopen prior to August 15, 2021. If your agency would like consultation on facility or worksite issues, contact Cheryl Sullivan-Colglazier. You can reach her via OFMSafeStart@ofm.wa.gov or at 360-489-5628.

Sheri Sawyer is the point of contact for services that occur outside of a state facility or worksite. You can reach Sheri at sheri.sawyer@gov.wa.gov or at 360-480-9321.

- To request approval to open before August 15, 2021, agencies must follow the current process for approval outlined below.

  - OFM reviews and approves cabinet agency plans to reopen services or have employees re-enter state operated facilities on a regular basis. Agencies must use this form to initiate the process. Facilities and institutions that provide 24/7 care and services do not need to receive additional approval when adding or increasing services within a facility that has already been open before Oct. 15, 2020. Instead, they must submit a consultation request on their plan before they add or expand services.

  Cheryl Sullivan-Colglazier is the point of contact for these reviews and consultation. You can reach her via OFMSafeStart@ofm.wa.gov or at 360-489-5628.

The Governor’s Policy Office is responsible to review and approve cabinet agency reopening activity when an event or specific business function occurs outside of a state facility. This includes services and activities such as in-person testing for professional certification or related training (non-state employee specific), inspections, child welfare visits, etc. done by state employees or state contractors. Sheri Sawyer is the point of contact for these reviews. You can reach Sheri at sheri.sawyer@gov.wa.gov or at 360-480-9321.
Non-cabinet state agencies and organizations must follow the requirements of the governor’s Healthy Washington - Roadmap to Recovery plan. The form and Healthy Washington - Roadmap to Recovery Guide for state agencies can serve as planning tools. They may also consult with Cheryl or Sheri for assistance.

How to prepare your facility

Occupancy, physical layout, staggering shifts, the flow of people, and sanitation of the worksite are all important components of a staged reopening and maintenance plan to keep people safe and productive.

Requirements and Guidelines

Make sure to complete cleaning, sanitation, HVAC and water system preparation and maintenance, and physical layout preparation before employees return to specific worksites and facilities. Make sure there is an adequate supply of required PPE and/or source control for employees who will be at the worksites or providing in-person services, with purchase plans in place for ongoing PPE needs to meet the requirements outlined by the Governor’s Office, DOH, L&I, OFM and the CDC.

Co-located agencies

When agencies are co-located in a facility, agency leaders must coordinate to align practices for access and entry points, shared space/common areas, and where applicable, PPE for employee, customer and business partner health and safety.

Residential care, health care, and related facilities

Special requirements are in place for essential service facilities that require close contact. In those cases, those facilities must follow the requirements and guidelines specific to their type of facility and service delivery when inconsistent with the requirements in this guide.
Mandatory social distancing

Employers must make sure all employees keep at least six feet away from co-workers and the public, when feasible. Other prevention measures are required such as using barriers to block sneezes and coughs and improving ventilation when social distancing isn’t possible. This could include enhancing ventilation in common areas, increasing the amount of outdoor air coming into the building, and running the system longer than normal.

- Prevent gatherings of any size by taking shifts to eat meals, perform activities or take a break. When two or more people must meet, they must have at least six feet between them and wear a face covering unless they need additional PPE.
- Place face shields or sneeze guards throughout the worksite at all places of potential interaction between service providers and clients.
- Apply methods that could include:
  - Reducing the number of employees, customers, and business partners in or at the worksite at a given time.
  - Controlling movement through choke points, elevators, stairwells, and other limited space areas to maintain social distancing standards or determine adequate PPE.
  - Providing expectations for common areas such as bathrooms, kitchens, etc.

Occupancy

Be strategic and deliberate about the number of people present in a worksite. Introduce mandatory social distancing protocol at workstations, common areas, points of entry and exit, and potential “choke” points where physical space gets smaller as people pass through an area and the risk of close contact increases.

Occupancy rates outlined by the governor’s Healthy WA Roadmap to Recovery can be used as a reference. In some cases, however, they may not apply to agency facilities, worksites, or locations of services. The ability to physically distance, apply barriers and use masks or other PPE to mitigate close contact are important drivers in decision making.

While there are fewer concerns for more remote and outdoor worksites, you must still apply applicable occupancy or distancing requirements to commonly used areas and locations where contact is more likely to happen. You must limit the number of people in a worksite so you can maintain at least six feet between people and minimize the potential of close contact. In some cases, specific businesses or services may have additional occupancy rates or limits to how many people can gather. (See COVID-19 Reopening Guidance for Business and Workers and consult with OFM and your AAG(s) for application and reopening clarification).

Frequent and adequate handwashing

Employees must frequently and adequately wash hands. You must provide and maintain adequate handwashing supplies with a frequent schedule to restock supplies and empty trash. While agencies may provide gloves, employees must wash their hands regularly to prevent the spread of the virus.
Single use, disposable gloves may help workers whose hands are bothered by frequent washing and sanitizing. Each worksite needs soap and hot and cold (or tepid) running water for frequent handwashing. Require employees to wash their hands frequently and effectively when they arrive at work, leave their workstations for breaks, before and after all client interactions, before and after going to the bathroom, before and after eating or drinking or using tobacco products, after touching surfaces suspected of being contaminated, and after coughing, sneezing, or blowing their nose. Worksites that don’t have fixed bathrooms must supply portable handwashing stations and supplies.

- Agencies must provide supplemental hand sanitizer stations, wipes or towelettes, or clean water and soap in portable containers to facilitate more frequent handwashing after handling objects touched by others. This also includes making sure you also provide hand cleaning supplies in vehicles.

Routine and frequent cleaning

- Establish a housekeeping schedule to address regular, frequent cleaning with a particular emphasis on commonly touched surfaces.
- Frequently clean and disinfect high-touch surfaces at locations and in offices, such as shared tools, machines, vehicles and other equipment, handrails, doorknobs, and restrooms. Make sure these surfaces are properly disinfected on a frequent or periodic basis using a EPA-approved disinfectant (see link to CDC cleaning guidelines below).

In addition to standard Occupational Safety and Health Administration and L&I requirements for use of chemicals and employee safety, you must provide sanitation workers appropriate PPE for these tasks and train them on work expectations. If these areas cannot be cleaned and disinfected frequently, you must shut down these locations until your worksite can achieve and maintain these measures.

- Provide appropriate and adequate cleaning supplies and PPE for scheduled cleaning (include spot cleaning) after a suspected or confirmed COVID-19 case.
- Make sure someone is in charge of regularly cleaning floors, counters and other surfaces with water and soap or other cleaning liquids to prevent build-up of dirt and residues that can harbor contamination.
- Make sure shared work vehicles are regularly cleaned and disinfected after each use or as otherwise required by the CDC, DOH, or L&I.
- In areas visible to all employees and clients, you must post the required hygienic practices. These practices include:
  o Don’t touch your face with unwashed hands or with gloves.
  o Wash hands often with soap and water for at least 20 seconds.
  o Use hand sanitizer with at least 60% alcohol.
  o Frequently clean and disinfect touched objects and surfaces such as workstations, keyboards, telephones, handrails, machines, shared tools, elevator control buttons, and doorknobs.
Cover the mouth and nose when you cough or sneeze, as well as other hygienic recommendations by the U.S. Centers for Disease Control.

- Make sure to frequently and appropriately clean and disinfect restrooms throughout the day.
- Tissues and trash cans must be made available throughout the worksite.
- Establish protocol to safely clean equipment and supplies that employees transport to and from work consistent with health standards (laptops, etc.).

**Establish protocols to address sick employees**

Employers must establish procedures that:

- Require sick workers to stay home or go home if they feel or appear sick.
- Screen employees for signs/symptoms of COVID-19 at the start of the work shift. Ensure employees self-monitor during their shift for signs and symptoms and report them, when appropriate.
- Identify and isolate workers who exhibit signs or symptoms of COVID-19 illness
- Follow cleaning guidelines set by the CDC (see link below) on when and how to clean after you get a report of an employee with suspected or confirmed COVID-19 illness.
- Temporarily close off all areas where a suspected or confirmed COVID-19 illness sick employee worked or could have touched until you have completed cleaning and disinfection guidelines set by the CDC.
- Keep workers away from areas being deep cleaned.

**Educate employees**

When you determine that an employee must return to a worksite to perform some or all of their duties, provide the employee with advanced notice unless it is an urgent situation. Notification gives the employee time to prepare before returning to the worksite, allows them time to consult with their supervisor or HR about questions or concerns if they are at increased or might-be-increased risk for severe illness, and provides time to make sure their worksite is ready. (Refer to OFM State HR guidance on how to work with increased-risk employees and the types of leave available.)

Provide employees who will return to a worksite with an orientation and training. Agencies must provide basic workplace hazard education about coronavirus. Make sure employees know:

- The signs, symptoms and risk factors associated with COVID-19 illness.
- How to prevent the spread of the coronavirus at work. This includes taking steps in the workplace to establish social distancing, frequent handwashing and other precautions.
- The importance of hand washing and how to effectively wash hands with soap and water for at least 20 seconds.
• Proper respiratory etiquette, including covering coughs and sneezes and not touching eyes, noses, or mouths with unwashed hands or gloves.

• Who to contact if they have questions or concerns about returning to the worksite. (See link below on requirements to address increased-risk employees or might-be-increased-risk employees.)

The orientation should also include information that helps the employee understand what to expect when they return to the worksite. This includes:

• Screening requirements.

• Safe entrance and exit to the worksite.

• Changes to workstation or site protocol.

• Their responsibility to prevent the spread of COVID-19 and ensure a respectful workplace culture.

• Additional training, support resources, and contact information to assist in successful return to work.

• Information unique to the successful operation of the worksite or position.

Include information about the benefits of vaccination and how employees can get a vaccine. Some ideas are included here:

DOH Guidance for Long Term Care Facilities

Screening

When work and service delivery require contact with people outside the places we live or telework, screening is a critical part of minimizing the spread of COVID-19. When employees and customers are accounting for symptoms and quarantine to avoid contact with others, the state can more quickly and safely expand service delivery and reopen. Screening exists to keep people safe and healthy by maintaining a safe and healthy workplace.

Screening can be a stressful process for those involved. Developing tools and processes that help to mitigate the stress, increase trust, and connect people to the benefits of health and safety are helpful in creating a more successful screening process.

It is also important to remember that employees are expected to contribute to a healthy workplace by complying with all safety and health practices that the employer establishes. This includes not knowingly exposing co-workers and the public to conditions that would jeopardize their health or the health of others.

Our ability to reduce the impact of COVID-19 — given the number of employees, business partners, and customers involved — warrants us taking a more cautious screening approach that aids safety and health.
Requirements and Guidelines

When is screening required?

- Screening is required for all employees who report to an out-of-home work location where they may be within six feet or less of other people, or in shared space that other people access (bathrooms, dining/kitchen areas, vehicles, etc.).
- Screening must be conducted at the start of the work shift and before the employee, customer, or business partner enters the worksite or state property (vehicle, facility, etc.).
- You do not need to screen employees who are teleworking and not accessing an out-of-home worksite.

What is required during screening?

All screening practices must require employees, customers, and business partners to answer questions related to each singular symptom of COVID-19. These are outlined in DOH’s COVID-19 Symptom Screening guidance. This will help determine if the person is experiencing any signs of those symptoms that are not caused by another condition. Where appropriate, screening must include questions related to current DOH and CDC guidelines on restricted travel found on the CDC website. All screening must limit questions to those that are related to the job/visit and consistent with business necessity and the federal Americans with Disabilities Act.

As with all practices, employers must avoid disparate treatment of employees during screening based on nationality, race, sex, or any other protected characteristics.

- Agencies must consistently apply standard screening tools to each area of business. This means each person who responds the same way to the same questions will lead to the same results (denied or granted access, secondary screening where applicable, return-to-work process).
- Agencies must write and present their screening questions based on the current DOH requirements. In the absence of DOH, OFM, or Office of the Governor information, follow CDC information.
- We strongly encourage agencies to document completion of daily employee screenings as an initial part of implementation. This helps employees adapt to the new behavior and get in the practice of checking for each symptom, which includes monitoring their temperature. While each identified symptom needs to be checked by the employee or a screener, the documentation does not require information about each specific symptom. The documenter can record a simple ‘yes’ to indicate the presence of symptoms or exposure so appropriate action can be taken. Do not require, or retain, any personal health information associated with this process.
- The agency or worksite should consider maintaining a log where visitors and customers are required to participate in the screening when it aids in notification or public health’s contact tracing. Encourage visitors/customers to provide their name and limited contact information so
that we can aid others in contact tracing, if needed. This is not intended to override or interfere with any other log practices or requirements an agency follows.

Using a screener

- When an agency determines the need to have a person conduct the screening process for employees or others wanting to gain access to the facility, the screener must be trained in the process, screening tool, and equipment.
- You must provide the screener with necessary PPE and sanitation supplies to minimize their exposure. If the screener is required to check temperatures of people in the screening process, you must provide the screener with a no-touch infrared thermometer.
- If temperatures are taken by the person being screened, all thermometers and related equipment must be sanitized between uses. Disposable thermometer covers are an option to consider, if available.

Choosing a screener

- Clearly identify who will perform screening. There is not a specific classification identified for this work. In some cases, onsite security personnel or contracted personnel are conducting entrance screening.
- If the screener is not a supervisor or manager, consider having a supervisor or manager available for the screener to contact if they have questions or need support.
- Ensure the screener is trained in the screening process and use of PPE and supplies before conducting the screening process.

Secondary screening

- The state requires a secondary screening for high-contact, mandatory coverage, high-risk worksites, such as 24/7 facilities.
- A trained medical professional must conduct a secondary screening.
- A secondary screening helps us further assess an employee who has confirmed symptoms that might indicate COVID-19 or another infectious disease. The result may be to screen “in” an employee who initially indicated a COVID-19 symptom.

What happens when a person passes a screen or is screened out of the workplace?

- When an employee, customer, or business partner has affirmed, through the screening process, that they have no symptoms, they are granted access consistent with the facility or property standards for social distancing, face coverings, PPE, and other safety measures.
- When an employee, customer, or business partner has affirmed they have experienced a qualifying symptom(s) as identified in the screening process, they will be denied access to
the facility or property. This step may involve secondary screening for high-contact, high-risk worksites such as 24/7 facilities.

What happens when an employee is denied access?

- The employer should handle these scenarios on a case-by-case basis. The employer should engage in a conversation with the employee being denied access to determine if telework options are available or to inform leave status. Telework options should be the priority. If the employee is denied access based on screening, the employer will exhaust all options for teleworking for the employee. These options could include having work packets or mobile workstations ready to check out.

- If telework options are available and the employee can perform those duties, the employer should send the employee home with telework until they are cleared to return to the worksite based on the criteria in, “When can an employee return to work?” below.

- If there are no telework options, consult with your HR team and refer to OFM SHR workforce leave guidance on how to proceed. If the employee is subsequently diagnosed with the COVID-19 virus, the agency should advise the employee about other state and federal leave options that are available, depending on the circumstances.

- If the employee provides a statement from a medical professional stating that the employee does not have a contagious illness and the symptoms the employee exhibited are not because of COVID-19, the employer will grant the employee access to the worksite.

When can an employee return to work?

**Isolation** is when someone who has COVID-19 symptoms, or has tested positive, stays home and away from others (including household members) to avoid spreading their illness. An employee who has been in isolation may return to work under the following conditions:

- If the employee was symptomatic:
  - They are without a fever (100.4 or above) for at least 24 hours without the use of fever reducing medication; and
  - Their symptom(s) has improved, and they are able to work (loss of taste and smell may persist for weeks or months after recovery and doesn’t delay the end of isolation); and
  - There has been at least 10 days since the symptom(s) first appeared.

- If the employee tested positive with no symptoms:
  - They continue to have no symptoms, and
  - 10 days have passed since the date of the positive test.
• **Exception:** Employees who return after a severe case of COVID-19, or employees who are severely immunocompromised and return after a confirmed case of COVID-19, may need to isolate longer than 10 days and up to 20 days. A healthcare provider or infection control expert will recommend the best timeframe. Refer to the CDC’s return to work guidelines, adopted by DOH, for more information.

• **Quarantine** is when someone who has been exposed to COVID-19 stays home and away from others for the recommended period of time in case they were infected and are contagious. Quarantine becomes isolation if the person later tests positive for COVID-19 or develops symptoms. Infectiousness usually begins 2 days before symptoms or if no symptoms, 2 days before test results, and will last throughout the duration of symptoms, or 10 days after a positive test.

In the case of close contact* or exposure, an employee may return to work when:

• They are at or beyond the 14-day quarantine period or at the point the suspected case’s test came back negative.

• The CDC and DOH have included two shorter exceptions to return to work when there are extraordinary circumstances. The criteria and process for 24/7s is included in the DOH guidance for 24/7 facility screening. For other agencies facing critical staffing restraints that jeopardize essential services, these circumstances require consultation with OFM, and in some cases, the local health jurisdiction. Contact Cheryl Sullivan-Colglazier at cheryl.sullivan-colglazier@ofm.wa.gov or OFMSafeStart@ofm.wa.gov

• When an employee is in the same household (or similar exposure) as someone else who is isolating/positive or symptomatic with the virus, their quarantine starts the first day they are no longer exposed to someone who has the virus. In many cases this is someone the employee lives with, so it means when the person with the virus no longer needs to isolate (see criteria above).

For example, the person who is sick meets all the criteria and can stop isolating in 10 days, that is when the employee living with the person who was sick, starts counting their 14 day quarantine. In this case the person could be out of the worksite for 24 days as long as they don’t become symptomatic or test positive.

• Fully vaccinated employees who have been exposed to someone with COVID-19 are not required to quarantine if they meet all of the following criteria:
  
  o Are fully vaccinated (had both doses, and at least two weeks have passed since the second dose).
  
  o Have not had symptoms since current COVID-19 exposure. Fully vaccinated people should still watch for symptoms for 14 days after their exposure. They should also continue to wear masks, practice social distancing, and keep their social circles small.
o Employees who do not meet all the criteria listed above should continue to follow current quarantine guidance after exposure to someone with suspected or confirmed COVID-19.

- In addition, side effects from vaccination do not require someone to quarantine. If they are clearly from vaccination, the person would be able to attribute the symptoms to another condition. Common side effects are explained [here](#).

- Employees who have tested positive for COVID-19 within the past 3 months and recovered do not have to quarantine or get tested again as long as they do not develop new symptoms.
  o If the employee develops symptoms again within 3 months of their first bout of COVID-19 or after, agencies must apply the same approach as they do with other symptomatic employees.

Note: These options may not apply to people who must quarantine based on a travel restriction. In that case, the agencies must follow the quarantine requirements related to travel when they apply to the workplace.

*See page 21 for definition of close contact.*

- **Return to work** criteria can vary for certain professions who have close contact with others. Refer to CDC and DOH guidelines for additional information on those professions. One example is available [here](#) when they are immunocompromised.

- If an employee is exposed to someone who was exposed to COVID-19, the employee may return to work but must monitor themselves for symptoms. If symptoms are present, the employee would be screened out of the worksite. Follow the requirements for 'return to work' as you would for any other employee in this situation.

If the employee provides a statement from a medical professional stating that the employee does not need to quarantine or the employee does not have a contagious illness and the symptoms the employee exhibited are not because of COVID-19, the employer will grant the employee access to the worksite.

DOH has provided a calculator to assist in determining the length of isolation or quarantine based on the circumstances. It can be found here: [Isolation and Quarantine Calculator](#)

**Travel-related quarantine** rules are based on the proclamation titled [COVID-19 Restrictions for Travelers](#). The proclamation requires that travelers who travel by air, directly or indirectly, from any location outside the United States to the state of Washington comply with [CDC requirements](#).

For state agencies, in the case of quarantine based on a travel restriction (international or domestic essential work-related travel or an employee “screens out” based on information shared), an employee may return to work when:

- They are at or beyond a 14-day quarantine period after returning home.

- **Work-related travel** should be limited to essential travel at this time. When an employee travels as a function of their employment, all the guidance outlined in the proclamation and the
CDC guidelines will be applied.

**What happens when someone refuses to be screened?**

- If an employee, customer, or business partner refuses to participate in the screening process, they will not be allowed access to the worksite/property.

- Each agency has unique circumstances in managing this situation. Make sure you have protocol in place to respond to this situation and ask your assigned AAG to review the protocol before it is finalized. Include notice of refusal in communications to employees, customers and business partners.

**Does an agency need to report cases of COVID-19?**

- Agencies must notify the local health jurisdiction within 24 hours if the employer suspects COVID-19 is spreading in the agency’s workplace, or if the agency is aware of two or more employees who work at a state facility or state worksite that develop confirmed or suspected COVID-19 within a 14-day period. Notification is provided to the local public health jurisdiction where the employees work.

- Do not base your reports on “word of mouth” or rumored reports. Base them on first-hand information from the employee with the virus or another credible information source (e.g., health care provider, authorized family member).

- Suspected cases are when an employee is not a confirmed case of COVID-19, but they have symptoms consistent with COVID-19 and are getting tested, or they are quarantining because of possible exposure to someone who has COVID-19 and they have not yet been tested.

- Agencies will work with their local health jurisdictions to establish the best reporting protocol for reporting cases or suspected cases. This will include who provides the notification. (See link below for local health jurisdiction contact information.)

- Agencies will tell the involved employee(s) about the notification and what information the agency has shared.

**Documentation and records**

- You must maintain all documented screening assessments consistent with state records and retention laws and policy. This includes following any requirements to safeguard confidential information under other laws, such as HIPAA and the ADA.

- Screening records have the primary purpose of ensuring a safe workplace for agency employees. Categorize these records as Entry/Exit Logs – Facilities (DAN GS 25009) for retention purposes. (See “Using records retention schedules” (August 2020) on the Secretary of State website under “COVID-19 Screening Records Advice” for more information.)
• You may request proof of vaccination to verify a person’s ability to return to work under these circumstances:
  • A fully vaccinated employee wanting to return to work after close contact without having to quarantine, and
  • To approve leave when someone requests leave for vaccination.

Records retention requirements may vary in each circumstance. For example, we consider proof of vaccination to avoid quarantine part of the screening process we outlined above. Proof of vaccination for leave approval is associated with the records requirements related to leave. Consult with the Secretary of State’s information and your assigned AAG(s) as needed.

• You may request a COVID-19 test result to verify if an employee is approved to return to work after a shorter quarantine (like we outlined in the section on quarantine above (e.g. travel)). Apply records retention requirements and consult with the Secretary of State’s information and your assigned AAG(s) as needed.

• If the employer receives a public records request or a request from a union for employee records related to COVID-19, seek advice from your assigned AAG(s).

**Employee notification and orientation**

• You must provide employees with the screening tool and process as a part of their orientation before they return to work for the first time, and updates when the tool or practices have changed. The orientation will include information about the level of confidentiality in the screening process and any related documentation.

**Customer and business partner notification**

• Customers and business partners can review information about the screening tool and process before screening. Agencies are required to provide meaningful language assistance and communication access services about the process.

• The information will include the screening process’ level of confidentiality and any related documentation.

**Resources**

• Examples of screening tools as of June 2020. Screening tools will require the addition of new symptoms added by DOH on July 2, 2020.

**Personal protective equipment and safety equipment**

**Requirements and Guidelines**

We require personal protective equipment and other safety equipment in certain circumstances.

At this point, there should be no change in direction to face covering practices in the workplace setting. We know changes to face covering requirements are changing for people who are fully vaccinated. This is reflected in recent changes by the CDC and from the Governor’s Office for Washington. We are working to update our guidelines in consultation with L&I and DOH, so in the meantime the following requirements remain in place.

**Employees and contracted service providers**

- Provide PPE such as gloves, goggles, face shields and face masks (when appropriate or required) to employees. At a minimum, you must provide cloth face coverings for employees (when appropriate or required). An employee may choose to use their own cloth face covering if it meets L&I and DOH standards.

- Every employee who doesn’t work alone must wear a cloth or equivalent facial covering on the jobsite unless their exposure dictates a higher level of protection under L&I safety and health rules and guidance. Refer to Coronavirus Facial Covering and Mask Requirements and the updated recommendations from the CDC on Improve How your Mask Protects You for additional details. You also can visit the DOH website to read more about cloth facial coverings.

- Someone is considered to be working alone when they’re isolated from interaction with other people and have little or no expectation of in-person interruption. How often a worker can work alone throughout the day may vary.

**Examples of working alone include:**

- A lone worker inside the enclosed cab of a crane or other heavy equipment, vehicle, or harvester.
- A person by themselves inside an office with four walls and a door.
o A lone worker inside of a cubicle with 4 walls (one with an opening for an entryway) that are above the head of the seated or standing desk cubicle worker, and whose work activity will not require anyone to come inside of the cubicle.

o A worker by themselves outside in an agricultural field, the woods or other open area with no anticipated contact with others.

_For cubicles, ‘alone’ means:_

o The employee’s face below the height of the panels, typically while seated. The furniture panels act as a barrier to virus aerosols and droplets expelled if an employee is speaking, coughing, or sneezing.

o When an employee’s face is above furniture panel height and there are other people in the area, a face covering shall be worn. This includes when the employee leaves the cubicle space.

- Some employees might not be able to wear face coverings or certain types of PPE due to disabilities, medical, or religious reasons. If so — and if the employee requests reasonable accommodation — employers must try to accommodate unless it poses an undue hardship. Accommodation could include allowing telework, leave, temporary change in work duties, modified work schedule or workspace, enhanced PPE, etc. Work with your HR team and L&P AAGs when needed.

- If an employee refuses to wear required PPE or face coverings and the supervisor has worked with HR to determine there is no reasonable accommodation, consult with your HR Team and with your assigned L&P AAG, as needed.

- Service providers that contract with state agencies must follow the same employee PPE standards unless L&I or DOH requirements state otherwise. Agencies must amend contracts as needed to address these expectations, which include informing their employees or involved business partners.

- Employees working with deaf or hard of hearing peers or clients may temporarily remove masks during communicating to accommodate facial expression and lip reading.

- You must provide and maintain adequate supplies to support frequent and adequate hand washing. Use single-use disposable gloves, where safe and applicable, to prevent transmission on equipment and items that are shared, and discard after a single use.

_**Customers and visitors are required to wear face coverings and may be required to use other PPE**_

- Customers and visitors are required to wear face coverings. This is outlined in the DOH Secretary’s, [Order of the Secretary of Health 20-03](https://www.doh.wa.gov/DOHNews/2020/OrderoftheSecretaryofHealth20-03.htm), and the governor’s [Proclamation 20-25.6](https://www.governor.wa.gov/proclamations/2020-proclamation-025-6).

- In some cases, customers may be required to use other PPE. This requirement helps prevent the spread of virus to employees and other customers and visitors.
• Agencies will make sure social distancing requirements or barriers are in place to minimize close contact and identify areas where close contact is still happening. This can help agencies determine if other PPE is required.

• The CDC and DOH define close contact as someone who was within 6 feet of someone with COVID-19 for a cumulative total of 15 minutes or more within a 24-hour period. This includes when people are wearing face coverings. This is based on the approach that experts use for contact tracing. It’s a gauge to drive other more defining questions. Exposure can happen in less than 15 minutes. When contact occurs with someone who is contagious, the local health jurisdiction or health provider may ask additional questions to determine if someone may have been exposed in a shorter period of time. For instance, the virus can quickly spread if someone coughed, sneezed, or exhibited other behaviors. This reinforces the need to limit choke or contact points, require 6 feet of physical distancing, use required face coverings and PPE, and follow cleaning and sanitation protocol.

• Agencies will follow the best practices outlined by the Office of the Governor in the Overview of COVID-19 Statewide Face Covering Requirements.

Implementing face covering requirements for customers and visitors

If a customer or visitor is not wearing a face covering, agencies should take the following steps:

• An agency representative or employee should politely educate the customer or visitor about the public health requirement to wear a mask or face covering. Agencies may choose to keep a supply of disposable masks to offer customers who do not have one.

• If the individual still declines to wear a mask or face covering, the agency representative or employee should politely ask if the person has a medical condition or disability or religious reasons that prevents them from wearing a mask. Agencies cannot ask about the details about a person’s specific medical condition or disability and cannot ask for proof or documentation.

• For customers who are unable to wear a face covering, agencies are encouraged to offer some kind of accommodation for the customer such as curbside pickup, delivery or a scheduled appointment when physical distancing and/or other barriers can protect employees and other customers and visitors.

• If a customer or individual refuses to wear a face covering but does not have a medical condition or disability that prevents them from wearing a mask, the agency representative or employee must politely say that the agency cannot serve them and that they need to leave the premises. Under no circumstances should the agency representative or employee attempt to physically block an individual from entering or physically remove them from the premises unless directly associated with the authority and expectation of their position (i.e., law enforcement).

• If the individual refuses to leave, the agency representative or employee should follow whatever procedures they normally follow if an individual refuses to leave the establishment when asked to do so (this includes contacting local law enforcement to indicate that the individual is trespassing).
• Agencies will make this part of their reopening and maintenance planning and consult with their assigned L&P and program AAGs in developing and implementing their policy and protocols. Agencies must post signs and information, so customers are aware of the expectations and how their efforts help keep everyone healthy and safe. When practical, agencies will give this information to customers before the customers attend appointments or come to a worksite for services.

Accessing PPE and cloth face coverings

• The Department of Enterprise Services and the State Emergency Operations Center created a system to help agencies secure PPE, cloth face coverings and COVID-19-related cleaning supplies. The DES website outlines the process and we linked it as a resource below.

• The Department of Corrections Correctional Industries will also provide access to some PPE, cloth face coverings, and cleaning supplies. The DOC website outlines the process and we linked to it below.
