State, county, and city populations

The Office of Financial Management (OFM) develops population estimates each year as of April 1 for release in July. OFM has prepared these estimates every year for more than five decades for use by many state laws that allocate funds, determine program eligibility, and establish county participation under the Growth Management Act, among many other uses.

The state will use 2024 population estimates beginning January 2025 (RCW 36.13.100, 43.62.020, 43.62.030, 66.08.200, and 66.08.210).

Statewide population trends

The April 1, 2024, population estimate is 8,035,700. The population increased by 329,390 people (from births, deaths, and net migration) from the 2020 census, OFM-adjusted base. The annual population growth rate is about the same as last year at 1.1%.

Figure 1. State population change and components of change

Migration

Migration continues to be the primary driver behind population growth. From 2023 to 2024, net migration (people moving in minus people moving out) to Washington totaled 69,100, which is down 3,300 people compared to 2023’s net migration number. Net migration accounted for 82% of the state’s population growth, with natural change (births minus deaths) responsible for the other 18%.

To better understand the patterns of where migrants are coming from, we used surrendered driver license data to observe migration flows between Washington and other states. Approximately 38% of in-movers to Washington over the last year came from California, Idaho, Oregon, and Texas. The remaining states accounted for 39% of in-migrants, with 23% arriving from other countries. The share from other countries has risen dramatically in the past two years, increasing from 15% of license surrenders in 2022.

Figure 2. Driver licenses surrendered to Washington, 1990–24

Natural Change

During the past year, 15,500 people were added to the state’s population due to natural change, about 18% of population growth. While this is up 1,100 people from the previous year, it is still less than half the average of 36,700 between 1990 and 2020. In 2024, there were 24 counties with negative natural change, up from only 10 of the 39 counties in 2010. The decline in natural change is due to the combination of increasing deaths as the population ages and decreasing births as fertility rates decrease, which is expected to continue.

Figure 3. Births, deaths, and natural change

The decline in births is due to a decline in fertility rates. These rates and trends vary for women of different ages. In Washington, the decline is largely due to the dramatic decrease in fertility rates of women under 20 and those between 20 and 24. The increases in fertility rates among the higher ages are not enough to offset the drop among the lower ages. This trend has been occurring since well before the COVID-19 pandemic, although it appears to have accelerated since then.

Figure 4. Age-specific fertility rates

Housing

Housing, another indicator of population change, showed growth in 2024. Washington added 51,300 housing units, increasing the housing stock by 1.5%, when compared to 2023. This decade has begun with an annual housing unit change percentage that exceeded the previous decade average of 1%, adding about 31,500 housing units on average for that period.

Figure 5. Yearly change in housing units

Statewide, 67% of all new housing units in 2024 were associated with multifamily structures, up from 57% in 2021. This growth in multifamily units has come as the number of new one-unit or single-family structures has declined by 14% over the same period.

Figure 6. New housing units by type, 2024

County and city population trends

Population growth remains concentrated in the five largest metropolitan counties. For the 11th year in a row, more than two-thirds of state population growth occurred in the state's five largest counties: Clark, King, Pierce, Snohomish, and Spokane. King County accounted for the largest share of state growth this year at 35.8%, followed by Clark at 10.5%, and Snohomish at 8.6%. The state's 20 nonmetropolitan counties accounted for 9.8% of population growth.¹

Regional growth

Population growth varied regionally as well. In 2024, Eastern Washington grew by 1.0% and Western Washington by 1.1%. Metropolitan counties grew 1.1% and nonmetropolitan counties grew 1.0%. Rural counties grew by 0.9% versus 1.1% for nonrural counties.²

¹ Nonmetropolitan counties are the counties that are not metropolitan using the Office of Management and Budget's definition. Refer to the [current metropolitan counties map](#).

² We use the definition of "rural" described in RCW 82.14.370: population density of less than one hundred persons per square mile or a county smaller than two hundred twenty-five square miles (meaning San Juan and Island counties). Refer to the [population density criteria](#) for counties meeting this rural definition.

Figure 7. Percentage change in population by region

— Eastern Washington — Western Washington

— Metro — Non-Metro

— Non-Rural — Rural

Figure 8 shows the geographic distribution of population change by county. Kittitas was the fastest-growing county in 2024, with 2.7% growth, followed by Grant, Clark, and Lincoln at over 1.5%. In 2024, 14 counties experienced growth exceeding 1.0%, with seven of these being nonmetropolitan counties.

Figure 8. Distribution of population change by county

The population of incorporated places totaled 5,288,500 on April 1, 2024, an increase of 66,200 people since last year. Most of the population growth in incorporated areas was due to natural change and net migration rather than annexation (boundary changes). Of the total increase in incorporated area population, annexation only accounted for 800 people in that total.

The total unincorporated area population increased by 18,300 people over the previous year. The five most populous unincorporated county areas (Pierce, Snohomish, King, Clark, and Kitsap, respectively) have almost as much population as the five largest cities in the state (Seattle, Spokane, Tacoma, Vancouver, and Bellevue, respectively): 1.50 million versus 1.61 million.

Appendix A: Data tables

Notes:

- The county and municipal populations shown for 2020 are, with a few exceptions, the 2020 federal census PL 94-174 counts. Some 2020 counts may differ from the federal census. See Table 5 for more information.
- With the exception of corrections to federal census counts, annual estimates in this official series are not revised on the basis of other information that becomes available after the estimate date.

¹ The 2021 estimates in this table were revised November 30, 2021, after the 2020 Census P.L. 94-171 became available. These 2021 estimates supersede the estimates OFM released on June 30, 2021.

Symbols:

- * State certified special census
- # Informal census. A population and housing count that is considered accurate but does not meet all special census certification.
- + Informal count. A population count that is considered accurate but does not meet special census certification.
- \$ Adjusted census 2020 population and housing. See Table 5 for more information.

Table 5. Federal corrections and OFM adjustments to Census 2020 Public Law 94-171 counts

The Office of Financial Management is responsible for April 1 population determinations that are used for state revenue allocations to local governments and in selected state programs requiring population as a criterion for funding and/or administration.

Notes:

- Part cities are combined for ranking purposes.
- Negative annexed populations mean the city/town de-annexed an area or had a boundary line adjustment.
- Population in 2020 is OFM adjusted. See Table 5 for more information.

Notes:

- Housing counts for 2020 are OFM Adjusted values. See Table 5 for details.
- Estimates of housing units by structure type for 2020 are developed using an allocation procedure based on OFM Adjusted 2020 housing counts, Census 2000 Summary File 3 data, housing completion data (2000–19), and annexation census data (2000–19) reported by cities. The resulting 2020 estimates maintain the 2020 census counts of total housing units, occupied housing units and population in housing units.
- Housing unit estimates (post-2020) are developed using housing completion data reported by cities and counties and annexation census data and can be revised when more accurate data becomes available.
- Abbreviation: MH is for mobile or manufactured homes.

Notes:

- All boundary changes are due to annexation, deannexation, boundary line adjustment, or incorporation. Unless otherwise noted, the source is annexation (annexation, deannexation, boundary line adjustment), not incorporation.
- "Area" can sometimes be negative due to deannexation or boundary line adjustment.
- Areas less than 0.0005 square miles are shown as 0.000 square miles.
- Abbreviations: Pop. – total population

Notes: Intercensal estimate series produced March 21, 2024.

Appendix B: Supplemental information

Washington statutes related to the population estimates program

A number of statutes govern population estimate creation for the state, counties, cities, and towns.

- **RCW 43.41.110:** Assigns OFM duties related to population and annexation.
- **RCW 43.62.030:** Requires annual resident population estimates as of April 1 each year for cities and towns for the allocation of specific funds the following January 1.
- **RCW 43.62.035:** Requires annual resident population estimates as of April 1 each year for all counties for the allocation of specific funds in July of the same year.
- **RCW 43.62.040:** Requires agencies, counties, cities, and towns to furnish OFM with aid to produce population studies. Also states that OFM's population determinations are final and conclusive.

Population estimates development

Population estimates are for the resident population as defined by the U.S. Census Bureau. This includes people living in housing units, military personnel, and dependents, as well as persons living in correctional or residential care facilities and college students (all students counted where they live while attending school). Seasonal populations, such as vacationers or migrant farmworkers are counted at their location of usual residence. Anyone without a place of usual residence is counted where they are on April 1.

Population estimates are developed using standard and tested methods that prioritize accuracy and are tailored to the availability and quality of data at the state and local level.

The state population estimate is developed using a combination of methods that are based on the three basic components of change – births, deaths, and migration – to estimate population change since the latest decennial census. This follows the demographic balancing equation that states that the population in a particular year is the population from the previous year subtracting deaths and adding births and net migration (people moving in minus people moving out). Births and deaths, or vital statistics, are obtained from the Washington State Department of Health. The migration estimate is based on trend models and administrative and survey data such as employment, school enrollment, tax filers, driver licenses, and voter registration.

County populations are developed using averages of up to six models: trend extrapolation models (linear, shift-share, and growth share), ratio correlation, population to employment, and the housing unit method. The trend methods use data from 1990–2020 to extrapolate population change. The ratio correlation model includes school enrollment, voter registrations, auto registrations, housing, births, and deaths to persons over age 65 between 2010 and 2020, then tracks changes in these data in the

current decade. The population to employment model evaluates a ratio of population to employment for each county in the decennial year and applies this ratio to employment data each estimate year. Finally, the housing unit method makes assumptions about the occupancy rate, household size, and group quarters population of each county to estimate population change from housing unit change.

Cities' and towns' populations are determined primarily using the housing unit method to track change since the last decennial census, however, a small number of places conduct a special census of their population instead. City estimates use changes in the housing stock estimated from locally supplied housing and group quarters data along with occupancy rate and household size assumptions. Some group quarters are updated using information collected by OFM directly if that increases the accuracy of the data and lowers the burden on local governments. Recent annexations are also reported to OFM and accounted for in the housing and final population estimates. The method is largely dependent on the quality of the housing data supplied by cities and accurately determined occupancy and household size trends.

Small Area Estimates Program

Some areas that need population estimates are smaller than cities or counties or are not contiguous with those boundaries. The Small Area Estimates Program (SAEP) produces statewide population and housing estimates for these areas while maintaining as much consistency with the city and county estimates as possible.

SAEP produces data for census areas, "special areas" required by statute, and other areas of statewide significance. The programs can also create custom estimates for specific geographies. These estimates are not the official population estimates, however, they use the official estimates as controls with varying data and methodological adjustments made for smaller areas. The SAEP estimates distribute the official April 1 city and county estimates to the census-block level using information from residential building permits, assessor records, postal delivery statistics, and decennial census information.

To aggregate the census blocks to the varying geographies, SAEP uses parcel-point weighted interpolation techniques to allocate population for blocks split by the geographic boundaries. This approach uses the more spatially accurate parcel data to help put the population in the correct part of the block.

SAEP data products include tabular and GIS formats and contains total, household, and group quarters populations and total and occupied housing units. Estimates are provided for the following geographies:

- census block groups
- census tracts
- census designated places
- congressional districts
- legislative districts
- Tribal areas
- school districts
- fire protection districts
- public hospital districts
- selected islands

- urban areas
- urban growth areas
- Water Resource Inventory Areas
- Public Use Microdata Areas
- ZIP Code Tabulation Areas

Small Area Demographic Estimates

The Small Area Demographic Estimates (SADE) model produces a consistent set of small area demographic estimates for the state by age, sex, race, and ethnicity. The model is consistent with the SAEP estimates and uses Iterative Proportional Fitting to control census block demographic estimates to SAEP and county-level controls for each year using the decennial data as a base. SADE estimates use decennial data adjusted to match 1997 Office of Management and Budget race categories using the 2020 Census MARC data and OFM adjusted age-sex totals.

SADE data is not recommended for use below the census tract scale for each geography, a threshold of about 5,000 people. These methods mean that the census block population characteristics do not age forward as a traditional cohort model would, which further mean that age-related trends in small areas are likely to be impacted. Estimates are provided for the following geographies:

- census tracts
- congressional districts
- county
- legislative districts
- school districts
- state

The published data include tables for each geography representing the total, Hispanic, and non-Hispanic population tabulated using the OMB 1997 race category, five-year age group, and sex.

Changes to Race and Ethnicity Data due to Statistical Policy Directive 15

The federal Office of Management and Budget (OMB) has issued new standards for the reporting of federal race and ethnicity data through Statistical Policy Directive 15 (SPD15). Race and Ethnicity definitions evolve over time. As noted above, OFM race products currently use the Federal 1997 OMB standard for reporting races. However, on March 28, 2024, the OMB revised federal standards for the reporting of race and ethnicity data through SPD 15. [OMB has posted information about the new standard](#) and the process used to review and update it. OFM intends to transition to this standard (known as the 2024 OMB standard) as necessary data sources become available. The federal transition has a deadline of March 2029. See [Race and Ethnicity](#) Information page for more information.

Population data products

OFM produces a number of data products available at our website: <https://ofm.wa.gov/washington-data-research/population-demographics>. Specific products are available at links below and you can subscribe to updates via text or email from GovDelivery at https://public.govdelivery.com/accounts/WAGOV/subscriber/new?qsp=WAGOV_39.

Acknowledgements

OFM acknowledges the following entities for providing data and/or assistance in support of the population estimates program:

- Center for Health Statistics, Department of Health for supplying vital statistics data.
- Office of Research and Data Analysis, Department of Social and Health Services for providing institutional population counts.
- Department of Veterans Affairs for providing veteran institutional counts.
- Department of Licensing for providing driver license and vehicle registration data.
- Office of Superintendent of Public Instruction for providing student enrollment counts.
- Employment Security Department for providing state employment data.
- Puget Sound Regional Council for providing building permit information.
- City and county planners/staff for providing building permit and other information used in the development of April 1 population estimates.
- Housing directors at colleges and universities for submitting April 1 dormitory counts.
- Armed forces personnel at major military installations for contributing data on resident military population counts.
- Municipal Research and Services Center for providing technical assistance/resources related to annexation and revenue distribution.
- Agency personnel in other states who provide reciprocal data on interstate movements.
